

REQUIREMENTS

UNIQUE BASKET

1. Customer App

The customer-facing Flutter application (Android and iOS) covers the full journey from onboarding to order tracking.

Screen / Feature	Description
Welcome / Onboarding	Introductory screens shown on first launch, highlighting the app's value proposition before login.
Login with SMS OTP	Customer authentication using mobile number and OTP verification (MSG91).
Home	Main landing screen showing banners, offers, featured products, and quick category access.
Categories	Browse products organized by fruit and vegetable categories and subcategories.
Product Listing	Grid/list view of products within a selected category, with filters and sorting.
Product Details	Detailed product view with images, price, unit/quantity options, and add-to-cart action.
Search	Search bar to find products by name across the full catalog.
Cart	Review selected items, adjust quantities, and view the order subtotal before checkout.
Address Management	Add, edit, and select saved delivery addresses.
Checkout	Review order summary, delivery address, and select payment method before placing the order.
Cashfree Payment	Secure online payment collection integrated via Cashfree, with server-side verification.
Order Confirmation	Confirmation screen shown after a successful order placement, with order summary.
My Orders	List of past and current orders with their status.
Order Details	Detailed view of a specific order — items, status timeline, and delivery information.
Profile	View and edit customer profile information.
Notifications	In-app notification center for order updates, offers, and alerts (powered by Firebase FCM).

2. Admin Panel

The React.js + TypeScript web admin panel used by the business to manage catalog, orders, delivery, and customer engagement.

Screen / Feature	Description
Admin Login	Secure login for admin/staff users with role-based access control.
Dashboard	Overview of key business metrics — orders, revenue, customers, and alerts.
Products	Add, edit, and manage the product catalog (name, price, images, unit/stock).
Categories	Create and manage product categories and subcategories.
Inventory	Track and update stock levels for products.
Orders	View, process, and update the status of customer orders.
Customers	View the customer list, order history, and account details.
Banners	Manage promotional banners displayed on the customer app's home screen.
Delivery Management	Assign orders to delivery personnel and monitor delivery status.
Notifications	Send push notifications and announcements to customers.
Reports	Generate sales, order, and performance reports.
Settings	Configure app-wide/business settings — business info, delivery zones, and more.
